

Git - the photo album analogy

	Photo Album	Git
init	Get an empty photo album	Initialize a git repository
add	Select a picture or a bunch of pictures that will be put into the album	Select a file that will be updated in the next commit
commit	Stick the selected picture or a bunch of pictures in the album with a little description of the event	Create a new time-point in the git repository with indications of all file changes from the previous version
push	Transfer your local album online	Upload your local repository to an online repository
pull	Get the album on your computer from the online version	Download online repository so that it becomes your local repository

Start tracking changes in a folder = `git init`

= **initiate a git repository in your folder**

~ get a new empty photo album

```
git init
```
