

# Creating a photo album

- Getting a new empty album
- Month after month, select the pictures you care about that are associated with a specific event. Keep the others in a box.
- Start a new page and glue the pictures on it, add a little label to remember when it was and what happened
- Magically transfer all of that to an online album
- Start again

# Git - the photo album analogy

	Photo Album	Git
<b>init</b>	Get an empty photo album	Initialize a git repository
<b>add</b>	Select a picture or a bunch of pictures that will be put into the album	Select a file that will be updated in the next commit
<b>commit</b>	Stick the selected picture or a bunch of pictures in the album with a little description of the event	Create a new time-point in the git repository with indications of all file changes from the previous version
<b>push</b>	Transfer your local album online	Upload your local repository to an online repository
<b>pull</b>	Get the album on your computer from the online version	Download online repository so that it becomes your local repository
