

# **A TRACKING SYSTEM**

# Saving code history through file names

- script1.R
- script2.R
- script2modified.R
- script2modified\_last.R
- script2modified\_last\_v2.R

It's not good because:

- you don't know who changed it
- you don't know when it was changed
- you don't know what changed
- it is very complex to collaborate
