

To create a new R code chunk

To create a new chunk:

Click here ...

... and select R

Or use the keyboard shortcut:

cmd+option+l in MacOS

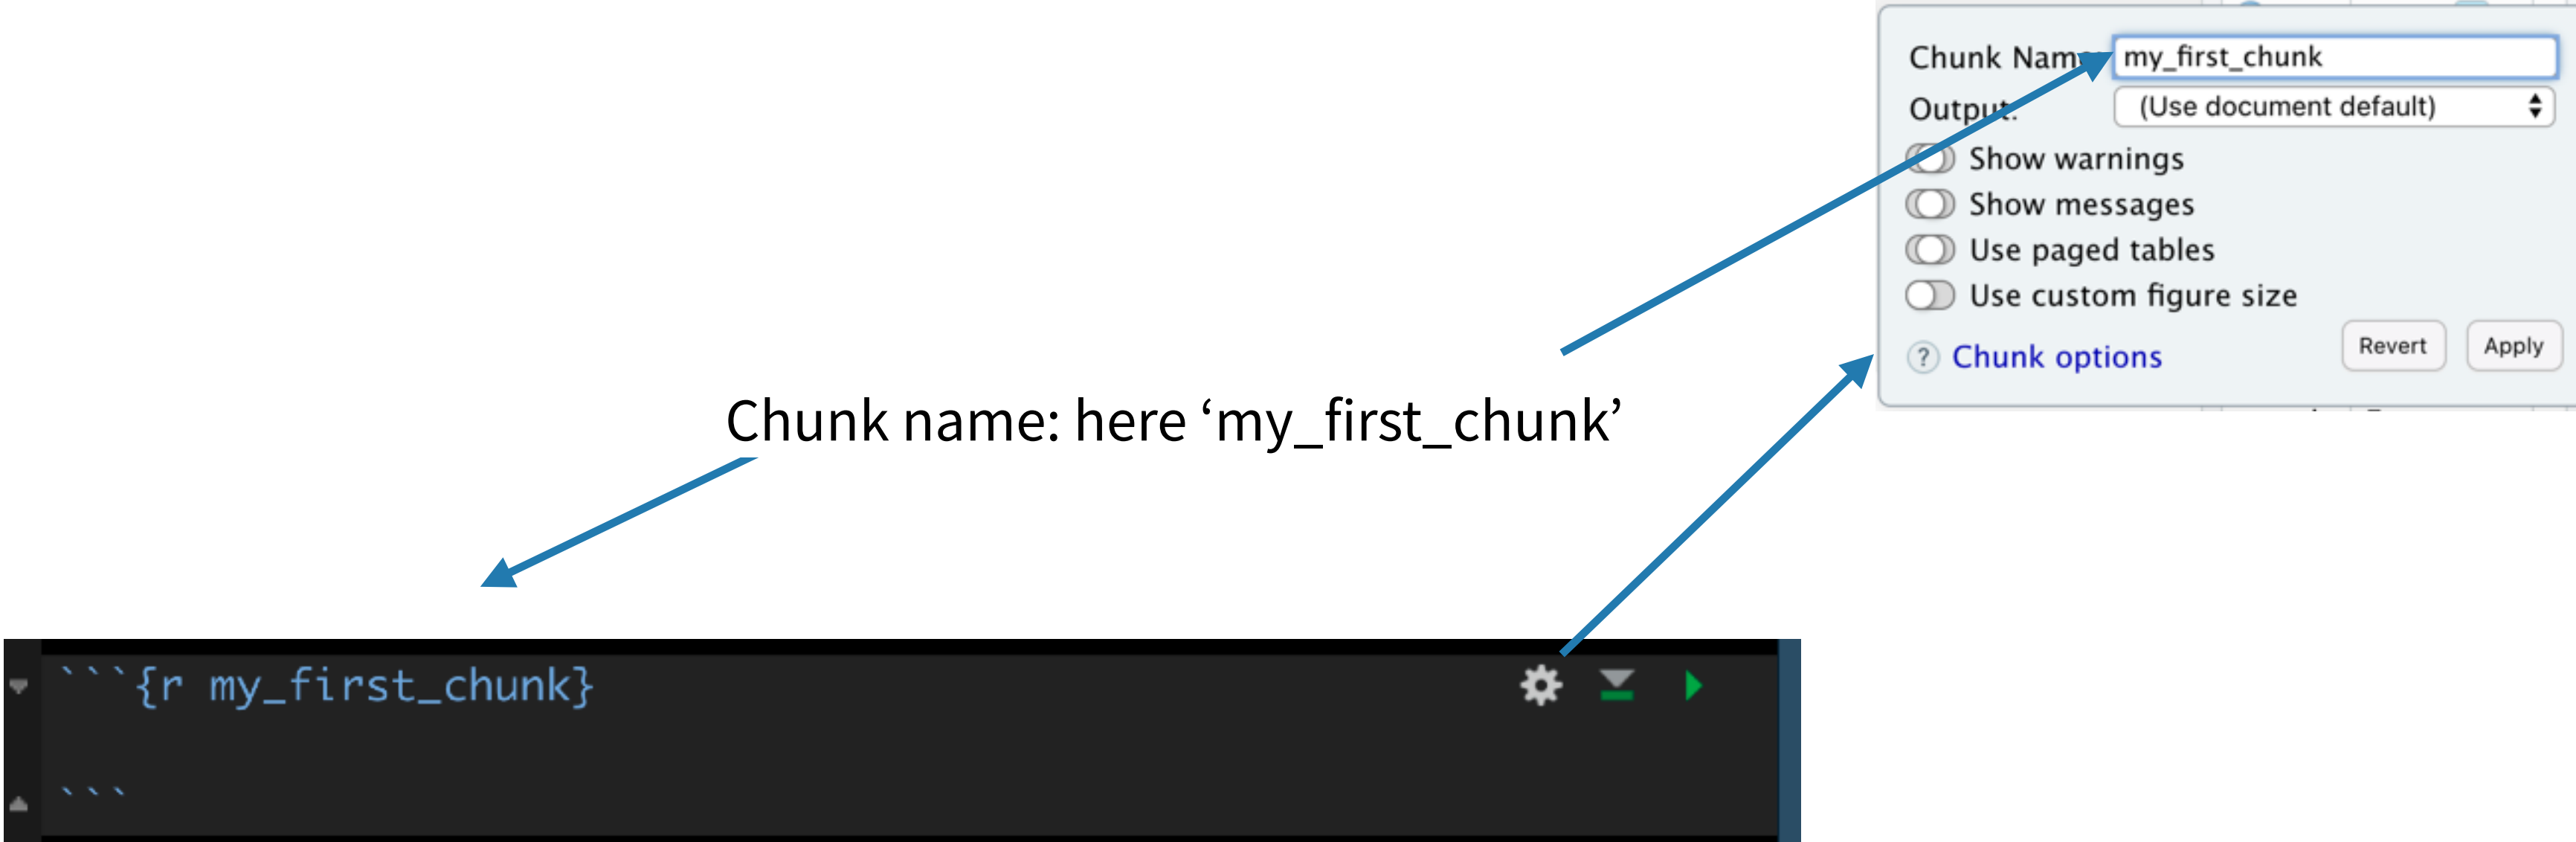

Ctrl + Alt + l in Windows

Name your chunks

The first text that follows the 'r' sign in the curly bracket will be interpreted as the chunk name. The chunk can also be named through the user interface when clicking on the cog symbol

Chunk name: here 'my_first_chunk'

The image shows a screenshot of the RStudio interface. At the top, a text box contains the code `{r my_first_chunk}`. Below this, a settings menu is open, showing the 'Chunk Name' field set to 'my_first_chunk'. The menu also includes options for 'Output' (set to '(Use document default)'), 'Show warnings', 'Show messages', 'Use paged tables', and 'Use custom figure size'. At the bottom of the menu are 'Revert' and 'Apply' buttons. A blue arrow points from the text 'Chunk name: here 'my_first_chunk'' to the 'my_first_chunk' text in the code. Another blue arrow points from the same text to the 'my_first_chunk' text in the 'Chunk Name' field of the settings menu. A third blue arrow points from the text to the cog icon in the code editor's toolbar.
