Github - a crypted language

To know which files to track, when to update our tracking system and information about changes we use git commands

**init
add
commit
push**

**pull
checkout
branch**

More details on all these commands <https://github.com/git-guides>

Creating a photo album

- Getting a new empty album
- Month after month, select the pictures you care about that are associated with a specific event. Keep the others in a box.
- Start a new page and glue the pictures on it, add a little label to remember when it was and what happened
- Magically transfer all of that to an online album
- Start again
